

FIV

This questionnaire will help you make a risk assessment for your cat in regard to contracting Feline Immunodeficiency Virus (FIV).

Risk Assessment Questionnaire

In Australia, between 14% and 29% of all cats are FIV positive (varies by state). There is no treatment or cure. Cats with FIV may develop Feline AIDS which is potentially a fatal disease. There is a vaccine available that can help prevent infection. If your cat is at risk, then please call us as soon as possible to discuss protection options.

Approximately how often does your cat go outside?

<input type="checkbox"/> Never NO RISK FACTOR	<input type="checkbox"/> Once a Month LOW RISK FACTOR	<input type="checkbox"/> Once a Week MEDIUM RISK FACTOR	<input type="checkbox"/> Every Day HIGH RISK FACTOR	<input type="checkbox"/> Lives Outdoors HIGH RISK FACTOR
--	--	--	--	---

Does your cat get into fights with other cats?

<input type="checkbox"/> Not that I know of LOW RISK FACTOR	<input type="checkbox"/> Occasionally HIGH RISK FACTOR	<input type="checkbox"/> Rarely HIGH RISK FACTOR	<input type="checkbox"/> Often HIGH RISK FACTOR
--	---	---	--

Has your cat ever had an abscess?

<input type="checkbox"/> Not that I know of LOW RISK FACTOR	<input type="checkbox"/> Once HIGH RISK FACTOR	<input type="checkbox"/> Several HIGH RISK FACTOR
--	---	--

Are there stray cats in your area?

<input type="checkbox"/> Not that I know of LOW RISK FACTOR	<input type="checkbox"/> One HIGH RISK FACTOR	<input type="checkbox"/> Several HIGH RISK FACTOR
--	--	--

If you think that your cat may be at risk, then please call us to discuss the risks and preventative measures as soon as possible.
